Education

Amrita Vishwa Vidyapeetham **2026 - 2028**
MTech in Computer Science Engineering *Coimbatore, Tamilnadu*

Jawaharlal Nehru Technological University **2021 - 2025**
BTech in Computer Science Engineering, Eluru College of Engineering and Technology(Affiliated)—8.75/10.0 *Andhra Pradesh*

Technical Skills

- **Programming Languages:** C++, Java, Python, JavaScript
- **Back-End:** Java, Spring Boot, FastAPI, Node.js, Express.js
- **Front-End:** React.js, HTML5, CSS3, Tailwind CSS
- **Databases:** PostgreSQL, MongoDB, ChromaDB
- **Authentication & APIs :** JWT, Passport.js, API Integration, REST APIs , Postman
- **Version Control & Development Tools:** Git, GitHub, VS Code
- **Concepts:** Data Structures & Algorithms, Retrieval-Augmented Generation (RAG), Object-Oriented Programming, Operating Systems, Computer Networks

Experience

Associate Software Engineer Intern **Sep, 2025 – Nov, 2025**
Better Software

- Integrated REST API endpoints between React Native applications and Java-based backend services, ensuring reliable data exchange across application modules.
- Worked with backend engineers on API contracts, request/response structures, and integration requirements for application features.
- Tested 20+ API scenarios using Postman, including edge cases and failure conditions, and investigated API inconsistencies through logs and debugging.
- Troubleshot API integration and runtime issues while developing React Native screens using TypeScript and integrating backend APIs.

Projects

Nexus – Multi-Tenant AI Knowledge Platform | FastAPI, React.js, PostgreSQL, ChromaDB, Groq AI | GitHub

- Built a multi-tenant AI platform enabling organizations to upload documents and deploy embeddable RAG-powered chatbots.
- Developed FastAPI REST APIs for authentication, document management, chatbot generation, and conversational query handling.
- Built a document processing pipeline for PDF extraction, chunking, embedding generation, and semantic indexing in ChromaDB.
- Implemented RAG-based question answering using Groq AI to generate citation-aware responses with confidence scores.
- Built a React dashboard for document management, chatbot customization, analytics, and embeddable widget generation.
- Designed a PostgreSQL schema for multi-tenant data isolation, user authentication, chat history, and organization management.

AI-Based Identity and Travel Document Fraud Screening | Python, OCR, OpenCV, Machine Learning — In Progress | GitHub

- Developing an AI-based system to screen passports, identity cards, driving licenses, and travel documents for potential fraud.
- Building an OCR and document validation pipeline to extract identity fields and check formats, and document-specific rules.
- Developing image-based tampering detection to identify potential text modification and photo replacement in document images.
- Implementing face verification to compare the photograph on a document with the presented face and generate a similarity score.
- Combining document validation, tampering detection, and face verification results to generate a risk indication and flag suspicious documents for manual review.

Wisher – Automated Greeting Platform | React.js, Node.js, Express.js, MongoDB | GitHub

- Built a full-stack event scheduling platform that automatically delivers personalized greetings based on user-defined schedules.
- Implemented server-side scheduling using the node-scheduler package to automatically trigger and send greetings.
- Designed REST APIs for authentication, scheduling, and message delivery workflows.
- Implemented Passport.js authentication for secure login sessions.
- Designed a MongoDB schema with indexed collections for users, messages, and schedules.

Achievements

- Published DataPros, a Python package on PyPI for automating machine learning data preprocessing workflows.
- Ranked 10th place among participating teams in the NASA International Space Apps Challenge - Certificate.
